Concussions in youth sports are a reality!

A Head of the Game can help prepare and protect your student athlete's most important asset – their brain.

In the United States, over 300,000 sports-related concussions occur annually, and the likelihood of suffering a concussion while playing a contact sport is estimated to be as high as 19% per year of play. More than 62,000 concussions are sustained each year in high-school contact sports.

Are you prepared if your child is injured?

Dear Parents,

Having a Baseline test in place is an invaluable tool used by doctors to determine the severity of a concussion and to provide proper treatment. Along with physical assessment, ImPACT™ testing puts a strong foundation in place to manage the concussion properly and return your student athlete to school and to play. ImPACT™ testing is a non-invasive computerized neurocognitive exam that measures your child's cognitive abilities such as recall, reaction time and pattern recognition. The test is set up in a "video game" type format and takes approximately 35 minutes to administer. Test data are stored on ImPACT'S secure site and are password protected. If a concussion is suspected, the test data will be provided to an ImPACT specialist and the athlete will re-take the test. The pre and post-injury test data can help health professionals assess the severity of the injury and determine when return to play is safe.
and appropriate.

Cost is $40/per person for baseline testing. Players must be 10 years or older.

A Head of the Game will be testing in the Winchester Room of Town Hall from 10am–2pm on Saturday, December 15th. PLEASE VISIT OUR website FOR MORE INFORMATION ABOUT CONCUSSIONS AND ImPACT TESTING.
